SUMMARY

Junior backend developer with a technical diploma in Computer Science (Fundación Kinal) and a 400-hour internship at RedIntelfon automating workflows with Make, Python and the OpenAI API. Built REST APIs and microservices with C#/.NET, Node.js and Java in team projects, using PostgreSQL, MySQL, MongoDB, JWT and Docker. Looking for my first backend role to deliver maintainable code and keep growing in a professional team.

EXPERIENCE

Software Development Intern (400 hours) | RedIntelfon, through TEC Guatemala Aug 2026 - Nov 2026

- Automated bank statement processing workflows with Make and Python, surfacing the results in a dashboard.
- Built AI-powered flows on the company's OpenAI API, including a help chatbot that also interacts with the dashboard.
- Worked with the El Salvador team to build a centralized dashboard that brings all other dashboards together, coordinating tasks on shared boards.
- Documented every dashboard and set up the databases each solution required.

PROJECTS

CrediExpress - Microservices banking system HexaCodee team | Role: Backend

- Developed backend microservices with C# and .NET, secured with JWT authentication.
- System of 10 independent microservices deployed on Render, using PostgreSQL (Supabase), MongoDB Atlas and Docker.

AlertaGT - Geolocated citizen alerts HexaCodee team | Role: Frontend

- Built the React interface with custom hooks, consuming Node.js/Express and .NET 8 REST APIs, for an incident reporting system with geolocation, roles, push notifications (Firebase), MongoDB and a reputation system to validate reports.

FoodPilot - Restaurant management platform HexaCodee team | Role: Database

- Owned the PostgreSQL and MongoDB data model for a microservices architecture built with .NET 8 and Node.js: tables, menus, orders, reservations and role-based users.

Kalum - Academic management system Individual | Fullstack Java program

- Developed an enrollment REST API with Java 21, Spring Boot, Spring Data JPA and MySQL (relational schema and stored procedures), an authentication service with Vert.x and hashed passwords, and a React + TypeScript frontend.

TECHNICAL SKILLS

Languages: C#, Java, JavaScript (ES6+), TypeScript, Python, SQL
Backend: .NET 8, ASP.NET Core, Entity Framework Core, Node.js, Express, Spring Boot, JPA/Hibernate, REST APIs, microservices, JWT
Databases: PostgreSQL, MySQL, MongoDB, data modeling, stored procedures
Frontend: React, HTML5, CSS3
Tools & DevOps: Docker, Git, GitHub, Postman, Maven, Render
Automation & AI: Make, Python, OpenAI API (chatbots and agents)

SOFT SKILLS

Teamwork and remote collaboration with international teams | Agile methodologies | Clear communication and technical documentation | Fast learner | Logical problem solving | Organization and discipline

EDUCATION

Technical Diploma in Computer Science (Perito en Informática) | Kinal Technical School 2024 - 2026
Fullstack Java Developer (180 hours) | Fundación Kinal 2025 - 2026

LANGUAGES

Spanish: native | English: B1+ (DynEd International certification, verification code n-ra-40pf-itas-mz)
